## THE COUNCIL

## RECALLING:

1 The function of IALA with respect to Safety of Navigation, the efficiency of maritime transport and the protection of the environment.

2 Article 8 of the IALA Constitution regarding the authority, duties and functions of the Council.

## RECOGNIZING

1 the need to provide guidance within which the colours and colour boundaries of surface colours used as visual signals on Marine Aids to Navigation should be determined; and

2 that such guidance should enable a common approach to be made world-wide, thus greatly assisting mariners, who, while passing through waters of different authorities, should not be confused by surface colours that are ambiguous;

NOTING this document only applies to Marine Aid-to-Navigation signals installed after the date of this publication;

ADOPTS the tables and charts in the annex of this Recommendation;
INVITES Members and Marine Aids to Navigation authorities worldwide to implement the provisions of the Recommendation;

## RECOMMENDS

- that the colour model used throughout all specifications is the chromaticity chart according to the CIE 1931 standard colorimetry system ( $2^{\circ}$-observer);
- that the standard illuminant for measurement is $\mathrm{D}_{65}(6500 \mathrm{~K})$;
- that the measurement geometry is $45^{\circ} / 0^{\circ}$;
- that National members, other appropriate Authorities and manufacturers providing Marine Aids to Navigation services adopt the system for surface colours set out in the annexes to this Recommendation;

REQUESTS the AtoN Engineering and Sustainability Committee or such other committee as the Council may direct to keep this Recommendation under review and to propose amendments, as necessary.

## ANNEX A ORDINARY COLOURS
